

## NanoDiode Online Survey

# DETERMINING EUROPEAN CITIZENS' VIEWS ON PRIORITIES FOR DESIRED FIELDS OF INNOVATION

Stakeholder engagement and dialogue are essential to the responsible development of nanotechnologies in Europe.

The project NanoDiode, funded by the European Union, establishes an innovative, coordinated programme for outreach and dialogue throughout Europe.

It integrates engagement activities along the innovation value chain: *'upstream' public engagement* (by way of dialogues that integrate societal needs and expectations into the policy debate); *'midstream' engagement* (by organising open innovation workshops at the level of R&D); and *'downstream' strategies* for education and communication. For more information, see: [www.nanodiode.eu/](http://www.nanodiode.eu/)

### NanoDiode Survey – please compile and forward!

In-depth knowledge of public preferences is a prerequisite for responsive policy making. For this reason NanoDiode initiates an Online Survey, mapping non-expert Europeans' preferences for fields of nano-innovation, their hopes and concerns.

The survey results form the basis for future dialogue and outreach activities of NanoDiode and hopefully inspire policy-makers, researchers and producers across Europe.

On the NanoDiode website (<http://www.nanodiode.eu/activities/survey-3/>), the survey can be filled out in nine different languages.

**We would greatly appreciate if you could compile and forward the survey in your own networks, including your family and friends. Please keep in mind that the survey is directed primarily to lay consumers.**

On behalf of all NanoDiode partners, thank you for your help.

For more information regarding the NanoDiode survey, please contact:
